# WHAT YOU NEED TO KNOW ABOUT NON-CONSENSUAL SEXUAL DEEPFAKES

### What are deepfakes?

Deepfakes are fake videos made through the use of advanced technology. They make it appear as though individuals are in videos they never took part in. Production of a deepfake requires photos or videos that could be taken in-person, from social media, or otherwise found online.

This infographic focuses on the non-consensual use of adults' images and videos in the production and distribution of sexual deepfakes.

### What is image-based sexual abuse?

Image-based sexual abuse refers to the non-consensual production, recording, and distribution of sexual images and videos.

Sometimes this form of abuse is referred to as "revenge porn" but that is inaccurate and inappropriate for three main reasons:

- 1. "Revenge" often implies that an individual did something wrong or something to warrant retribution as though that is a justification for abuse, but it is not.
- 2. There are a variety of motivations for production of these images and videos beyond revenge including retaining power and control or financial gain.

  2. The word "porp" puts focus on the content and hides the abusive pature of these
- **3.** The word "porn" puts focus on the content and hides the abusive nature of these images and videos.

Instead of "revenge porn", this infographic uses the term **non-consensual sexual deepfakes** to refer to specific deepfakes, and **image-based sexual abuse** to discuss the wider phenomenon.

### The state of deepfakes:

The term deepfakes originated from a Reddit user that produced non-consensual sexual videos using images of female celebrities.

Data collected from

mainstream porn websites and video hosting sites (e.g. YouTube, DailyMotion) show that deepfakes are becoming increasingly prevalent.<sup>1</sup>

The number of deepfakes

doubled

between December 2018 and July 2019

960/0
of deepfakes on these websites are nonconsensual sexual videos

14,678
deepfakes were found on mainstream porn and video hosting websites

100% of non-consensual sexual deepfakes on these websites target women This number is an underestimate as more deepfakes are shared online through private messaging (e.g. email,

WhatsApp)

of women targeted on these websites are celebrities\*

\* The public nature of celebrities' lives may explain the high rates of non-consensual sexual deepfakes recorded on these websites. Individuals not in the public are likely to have their deepfakes shared in a more personal and targeted manner (e.g. through email or messaging to their friends, family, workplace, school). More research needs to be done on deepfakes that target those who are not celebrities.

Most deepfakes are sexual in nature & exploit women

# Non-consensual sexual deepfakes are a form of image-based sexual abuse

The non-consensual use of images and videos is damaging to individuals who have their image altered and to individuals in the original videos who have their identity erased and their work appropriated.

impacted their mental and physical health, economic well-being (e.g. losing their job when a video is sent to their employer), security (e.g. experiences of doxxing, stalking, harassment), and relationships with others.

Individuals who have experienced image-based sexual abuse have shared how it negatively

Deepfakes must also be considered in the broader context of gender-based violence as they can be used as a tool to maintain power and control over individuals. For example, a deepfake could be produced to threaten or extort an intimate partner in attempt to stop them from gaining child custody, leaving the relationship, or reporting the abuse.

## What can we do about non-consensual sexual deepfakes?

- Lobby government for deepfake laws and supports for individuals who have experienced image-based sexual abuse.
- to it.

   Take control of our digital spaces by ensuring that our pictures are private and we have

• Train organizations and services on what image-based sexual abuse is and how to respond
