

# Gender Earnings Gap Among Post-Secondary Graduates

Findings from a new Canadian report show that five years after graduation from publicly funded colleges and universities, women earn less than men in every credential (e.g. college certificates, doctoral degrees) and every field of study (e.g. sciences, humanities, engineering).<sup>1</sup>

Gender differences persist in earnings even when accounting for education level and preferences for field of study.

## Gender differences in earnings of post-secondary graduates

**One year after graduation, women on average earn 12% (\$5,700) less than men. Five years later, that gap widens to 25% (\$17,700).**

- While all fields of study displayed a gender gap at the fifth year, the extent of that gap did differ:
- Women with a bachelor’s degree in Health and related fields (e.g. Nursing, Public Health, Social Work) earn 1.9% (\$1,300) less than men (84.6% of graduates in this credential and field were female)
  - Women with college-level certificates and diplomas in Education (e.g. Early Childhood Education, Educational Support) earn about 45% (\$28,500) less than men (84.5% of graduates in this credential and field were female)
  - Women with master’s degrees in Business, Management, and Public Administration earn 32% (nearly \$40,000) less than men (49.1% of graduates in this credential and field were female)
